Term
Action Levels
Definition: In the Superfund program, the existence of a contaminant concentration in the environment high enough to warrant action
or trigger a response under Superfund Amendments and Reauthorization Act of 1986 (SARA) and the National Oil and Hazardous
Substances Contingency Plan.
Administrative Order On Consent
Definition: A legal agreement signed by EPA and an individual, business, or other entity through which the violator agrees to pay for
correction of violations, take the required corrective or cleanup actions, or refrain from an activity. It describes the actions to be taken,
may be subject to a comment period, applies to civil actions, and can be enforced in court.
Acronym: AOC
CERCLA
Definition: Comprehensive Environmental Response, Compensation, and Liability Act (1980): See Superfund.
Cleanup
Definition: Actions taken to deal with a release or threat of release of a hazardous substance that could affect humans and/or the
environment. The term "cleanup" is sometimes used interchangeably with the terms remedial action, removal action, response action,
or corrective action.
Dewater
Definition: Remove or separate a portion of the water in a sludge or slurry to dry the sludge so it can be handled and disposed of.

Term
Dredging
Definition: Removal of mud from the bottom of water bodies
Feasibility Study
Definition: Analysis of the practicability of a proposal; e.g., a description and analysis of potential cleanup alternatives for a site such as one on the National Priorities List. The feasibility study usually recommends selection of a cost-effective alternative. It usually starts as soon as the remedial investigation is underway; together, they are commonly referred to as the "RI/FS".;a small-scale investigation of a problem to ascertain whether a proposed research approach is likely to provide useful data. Floodplain
Definition: The flat or nearly flat land along a river or stream or in a tidal area that is covered by water during a flood. Ground Water
Definition: The supply of fresh water found beneath the Earth's surface, usually in aquifers, which supply wells and springs. Impoundment
Definition: A body of water or sludge confined by a dam, dike, floodgate, or other barrier. National Priorities List
Definition: EPA's list of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial

Term
action under Superfund. The list is based primarily on the score a site receives from the Hazard Ranking System. Acronym: NPL
On-Scene Coordinator
Definition: Designated EPA official who coordinates and directs Superfund removal actions or Clean Water Act oil- or hazardous-spill response actions. Acronym: OSC
Operable Unit
Definition: Term for each of a number of separate activities undertaken as part of a Superfund site cleanup. Polychlorinated Biphenyls Definition: A group of toxic, persistent chemicals used in electrical transformers and capacitors for insulating purposes, and in gas
pipeline systems as lubricant. The sale and new use of these chemicals, also known as PCBs, were banned by law in 1979. Acronym: PCB
Potentially Responsible Party
Definition: Any individual or companyincluding owners, operators, transporters or generatorspotentially responsible for, or contributing to a spill or other contamination at a Superfund site. Whenever possible, through administrative and legal actions, EPA requires PRPs to clean up hazardous sites they have contaminated. Acronym: PRP
Record of Decision

Term
Definition: A public document that explains which cleanup alternative(s) will be used at National Priorities List sites where, under
CERCLA, Trust Funds pay for the cleanup.
Acronym: ROD
Remedial Action
Definition: The actual construction or implementation phase of a Superfund site cleanup that follows remedial design
Acronym: RA
Remedial Investigation
Definition: An in-depth study designed to gather data needed to determine the nature and extent of contamination at a Superfund site;
establish site cleanup criteria; identify preliminary alternatives for remedial action; and support technical and cost analyses of
alternatives. The remedial investigation is usually done with the feasibility study. Together they are usually referred to as the "RI/FS"
Remedial Investigation and Feasibility Study
Acronym: RI/FS
Remedial Project Manager
Definition: EPA or state official responsible for overseeing on-site remedial action.
Acronym: RPM
Removal Action

Term
Definition: Short-term immediate actions taken to address releases of hazardous substances that require expedited response.
(See Cleanup.)
Sediments
Definition: Soil, sand, and minerals washed from land into water, usually after rain. They pile up in reservoirs, rivers and harbors,
destroying fish and wildlife habitat, and clouding the water so that sunlight cannot reach aquatic plants. Careless farming, mining, and
building activities will expose sediment materials, allowing them to wash off the land after rainfall.
Silt Curtain/Fence
Definition: silt curtain, also called a turbidity curtain, consists of a heavy synthetic fabric suspended in a water body to prevent
sediment laden-water from migrating to the rest of the water body. Silt curtains and fences are commonly used when construction is
required near or within a water body where other erosion and sediment controls cannot be used. This may include dredging and bank
improvements.
Superfund
Definition: The program operated under the legislative authority of CERCLA and SARA that funds and carries out EPA solid waste
emergency and long-term removal and remedial activities. These activities include establishing the National Priorities List,
investigating sites for inclusion on the list, determining their priority, and conducting and/or supervising cleanup and other remedial
actions.
Supplemental Remedial Investigation / Feasibility Study

Term
Definition: Additional information that EPA has decided is necessary to carry out a proposed cleanup in the RI/FS. Acronym: SRI/FS
Fime-Critical Removal
Definition: Removal actions are generally of short-term response actions taken to abate or mitigate imminent substantial threats to numan health and the environment. Removal actions can be triggered potentially hazardous occurrences that cannot wait for emedial action.
Furbidity
Definition: A cloudy condition in water due to suspended silt or organic matter.
