Term	Acronym	Vocabulary	Vocabulary Type	Preferred Term		
Definition: Nonpoint So	ource pollution is a pol	lution source without a single point	of origin or specific o	outlet. NPS pollution generally		
results from land runoff, precipitation, atmospheric deposition, drainage, seepage or hydrologic modification. NPS pollution, unlike						
pollution from industrial and sewage treatment plants, comes from many diffuse sources. NPS pollution is caused by rainfall or						
snowmelt moving over and through the ground. As the runoff moves, it picks up and carries away natural and human-made						
pollutants, finally depo	pollutants, finally depositing them into lakes, rivers, wetlands, coastal waters and ground waters.
